Social Mountain

1. The only parameter the post button takes in is text, it puts an object with the text, an id, and a date for when the post was made.
2. The Get request gets all the posts created since December 2022; which use the string data types for the text and dates, and the number data for the id.
3. The URL to delete a post would look something like this:
<https://practiceapi.devmountain.com/api/posts/filter?text=Hello%20There>
4. The only way to filter out the posts is through text, the URL to get the text “Hello There” would look like this:

<https://practiceapi.devmountain.com/api/posts/filter?text=Hello%20There>. But if the post doesn't exist it would just show empty square brackets on the screen.

5. URL: <https://practiceapi.devmountain.com/api/posts/filter?text=Jonathan>

Body: [{"id":1641,"text":"Jonathan","date":"21 Apr 2023"}]

6. URL: <https://practiceapi.devmountain.com/api/posts/filter?text=blue.%20no>

Body: [{"id":1641,"text":"Blue. No Yellow","date":"21 Apr 2023"}]

7. URL: <https://practiceapi.devmountain.com/api/posts/filter?text=blue>

8. `content-type: application/json; charset=utf-8`

9. Removing the text property in the body completely from the body, there will be a 409 status.

10. If the id is put into the GET URL, the page will show this text "Request query is missing required text property." because it only takes in text.
